Ten sounds to build your child's hearing skills

Cochlear®
Hear now. And always

Ling 10 sounds are special speech sounds that help you develop your child's hearing across all the different pitches and tones they need for clear speech and language development, from low rumbling to high-frequency sounds.

mmm
Mmm... the ice cream is yummmy!

ahh
Ahh! A plane!

eee
Eeek! A mouse!

h-h-h
A dog pants "h-h-h"

shh
Shh... the koala is sleeping

sss
The snake says "hisss"

zzz
The bee says "buzzz"

j-j-j
A frog j-j-jumps

nnn
The clown has a funnny nnnose

ooo
The cow says "mooo"

Practicing with the Ling 10 sounds strengthens:

- ✓ **Sound recognition**
  Regular practice trains the brain to recognize different sounds, a building block for speech understanding.
- ✓ **Speech clarity**
  Helping your child build strong listening skills is fundamental for their growth toward clear, intelligible speech.
- ✓ **Parent relationship**
  Play an active role in your child's auditory development through consistent, positive listening interactions.
- ✓ **Device monitoring**
  If your child consistently misses a sound, share that with their audiologist or therapist.

How to use the Ling 10 sounds with your child

Ling sounds practice builds listening skills in a structured yet playful way. Daily exposure helps strengthen sound processing, accelerates your child's progress in learning to listen and speak, and gives you valuable insights into your child's hearing development. Try these exercises in order, advancing as your child's skills grow.

1. Detection: "Did you hear it?"

Say one Ling sound at a normal speaking volume while your child is not looking at your face and look for a reaction. A young child shows they heard it by looking at you, pausing their activity or reacting in some way. An older child can be taught to raise a hand, clap or select the card or toy that matches the sound.

2. Discrimination: "Can you hear the difference?"

Hold up flash cards or toys that represent two contrasting sounds. Say one of the sounds and ask your child to choose the matching item.

3. Identification: "Which sound did you hear?"

Hold up flash cards or toys that represent all sounds. Ask your child to choose the matching item.

4. Imitation: "Can you say it too?"

Ask your child to repeat the sound back to you. This helps you evaluate whether they hear the sound clearly enough to produce it.

5. Add distance and background noise: "Can you still hear me?"

Once identification is strong in quiet, try:

- Saying the sounds from across the room, keeping your voice at a normal speaking volume
- Adding soft background noise (fan, quiet music)

Tips for success

- ✓ Use your normal conversational voice.
- ✓ To avoid lipreading, sit next to your child side-by-side facing the same direction. Try not to cover your mouth as this will muffle your words.
- ✓ Keep it short. 1–2 minutes a day is enough.
- ✓ Make it playful. Hide-and-seek, toys or silly faces keep kids engaged.
- ✓ Celebrate effort. Praise listening behaviors, not just correct answers.
- ✓ Make it a habit. Frequent practice supports long-term success.
